

FOR IMMEDIATE PRESS RELEASE

Niraka Adds New Analytics Capabilities to its Smart Construction Platform

New platform blends construction applications and data to help owners and contractors improve performance

Santa Cruz, CA— August 6, 2022: Niraka today announced Niraka Construction Intelligence Cloud Analytics to address challenges of engineering and construction organizations who struggle to unlock data across applications to effectively diagnose problems, predict risks, and inform future actions.

The new solution combines data from Niraka’s Smart Construction Platform applications to give owners and contractors a comprehensive understanding of performance throughout their operations. With this insight, organizations can quickly spot and correct issues and target ways to drive continuous improvement across project planning, construction, and asset operation.

John Mathews, senior vice president of product, strategy, and marketing for Niraka Construction and Engineering said, “You can’t manage what you can’t measure. The new Niraka Construction Intelligence Cloud Analytics offering combined with the Smart Construction Platform’s predictive intelligence engine and common data environment, gives our customers a deeper, holistic understanding of their performance. Now they can build unique data strategies that drive competitive differentiation.”

The Smart Construction Platform unites capabilities from Niraka engineering and construction applications and third-party solutions with a common data environment and user experience. With the platform, owners and contractors can more easily work together to improve decision-making at every level of their organizations.

“We are always looking to find better ways to leverage our data to gain further insights into project performance and risk,” said David Reddy, project manager, Osaka Inc. “Blending data for analysis will provide the broadest and deepest view into our operations, helping us to understand trends across our business and identify ways to keep improving how we deliver projects for our customers.”

As the platform continually learns and gets smarter using machine learning technologies, it will take these past actions into consideration to flag potential risks and guide more informed decision making in the future.
